

Identifying and Treating Opioid Use Disorder in Primary Care October 29, 2016 Participant CE Information

Needs - With the induction of the Affordable Care Act (ACA), there is an increased emphasis on the integration of medical care with mental health care. Specifically, much of this integration burden has fallen on the primary care provider -increasing the knowledge needed to treat various conditions, including mental illnesses like addiction, without providing the necessary educational background. By providing education around addiction considerations from experts in this arena, primary care clinicians can be empowered with the knowledge of how to identify, treat, and/or refer appropriate patients, which will not only improve the delivery of care, it will improve health outcomes.

Audience - This activity is designed for, but not limited to, physicians/psychiatrists, nurse practitioners, psychologists, social workers, nurses, physician assistants, pharmacists.

Learning Objectives –

- Assess the current status of prescription drug abuse in Indiana compared to national statistics.
- Recognize existing regulatory measures intended to combat prescription drug abuse and their impact on current medical practice.
- Distinguish the currently problematic prescription drugs of abuse.
- Develop a plan for the appropriate diagnosis of substance use disorders in clinical practice.
- Compose a treatment plan for a patient with a substance use disorder that incorporates both pharmacotherapy and psychotherapy
